

Bug Tracking Workflow

Demonstration Report using Jira

Name: Shrikar Desai

SRN: PES1UG24CS916

Objective

This report demonstrates the creation and management of bug tickets for the project **Bug-Tracking-proj** using Jira's Board view. Five bugs were logged as issues, moved through the workflow stages (To Do → In Progress → In Review → Done), and tracked to successful completion.

Bug Creation Steps

Each bug was created via **Create** → **Issue type: Bug** under the project **Bug-Tracking-proj**, with the following details:

Bug 1: Creative brief submission fails when reference image is missing

Description	When a Client Buyer submits a creative brief without attaching a reference image, the system allows the submission to proceed without displaying an appropriate validation message. The form should validate the required reference image information before submission.
Priority	High
Status	To Do

Bug 2: Watermark is not applied to uploaded WIP draft

Description	When a Digital Artist uploads a WIP draft, the system does not consistently apply the required dynamic watermark. The uploaded draft should be automatically watermarked before it is made available for review.
Priority	High
Status	To Do

Bug 3: Expiring download link remains accessible after expiry

Description	A download link generated for a commissioned asset remains accessible after its configured expiry period. The system should invalidate the link automatically once the expiry time is reached.
Priority	High
Status	To Do

Bug 4: Revision request does not update revision count

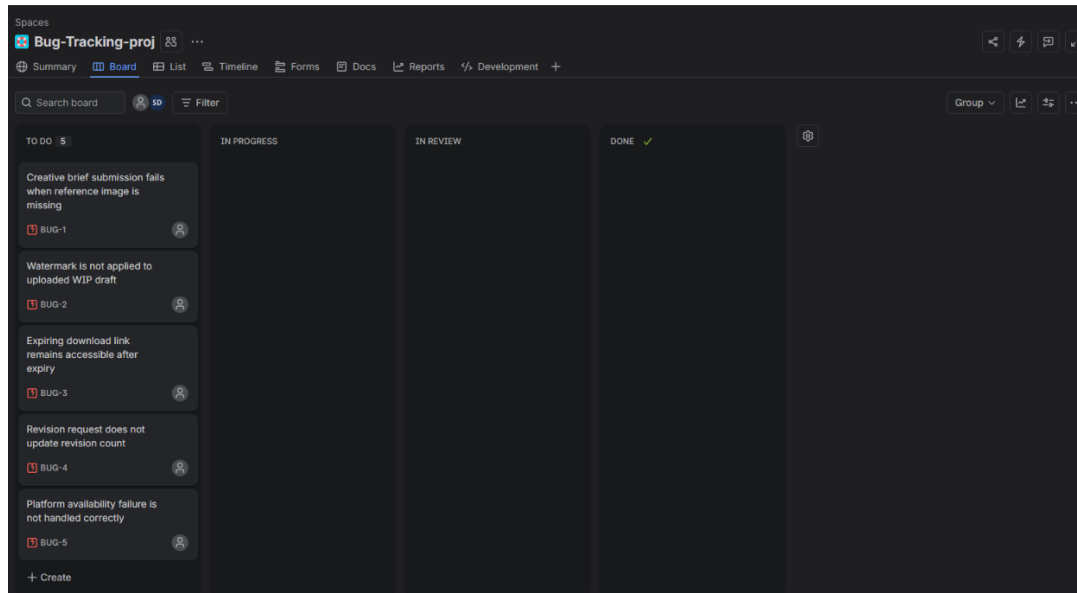

Description	When a Client Buyer submits a revision request, the revision count is not updated correctly. The system should increment and display the current revision count after each valid revision request.
Priority	Medium
Status	To Do

Bug 5: Platform availability failure is not handled correctly

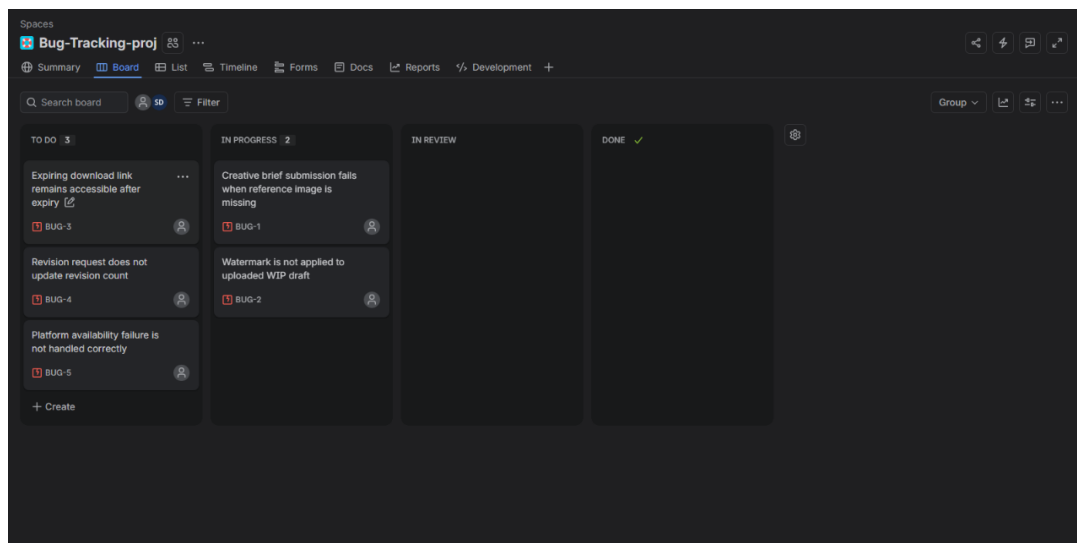

Description	When the platform or a required service becomes unavailable, the system does not provide the expected failover or error-handling behavior. The system should maintain availability and provide an appropriate response when a service failure occurs.
Priority	High
Status	To Do

Workflow Demonstration

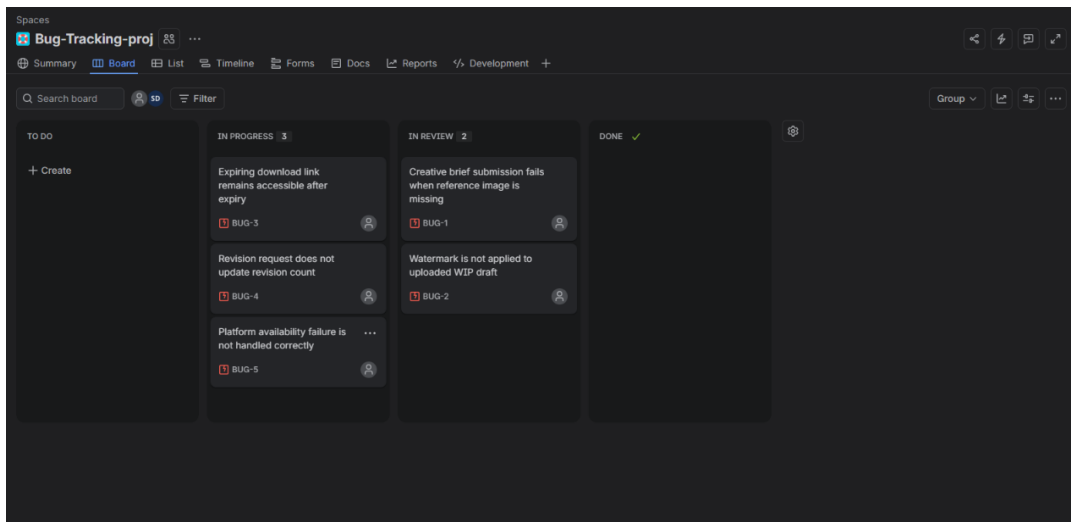

After all five bugs were created in the **To Do** column, they were progressively moved through the board to demonstrate the complete bug tracking workflow.

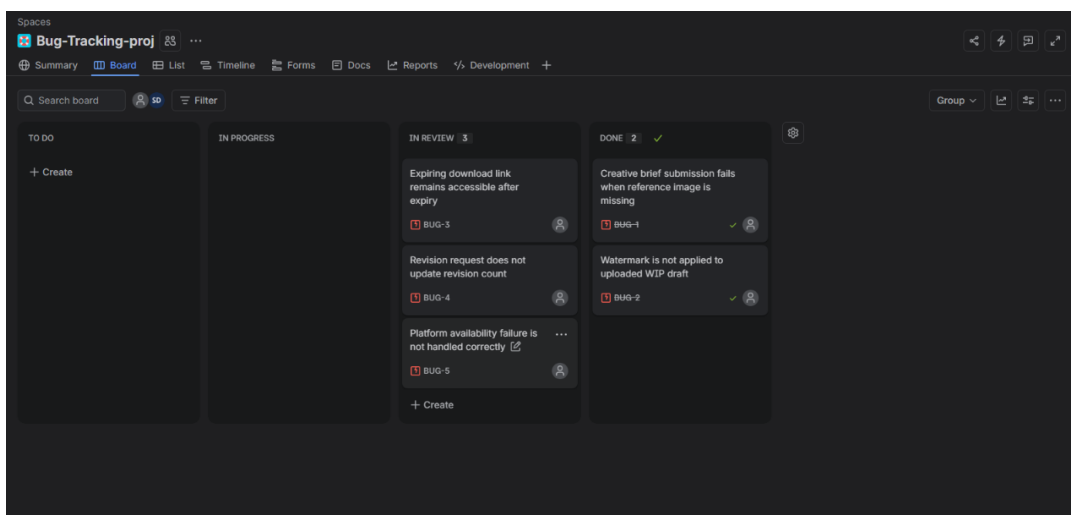

Step 1: All 5 bugs created and listed in the To Do column.

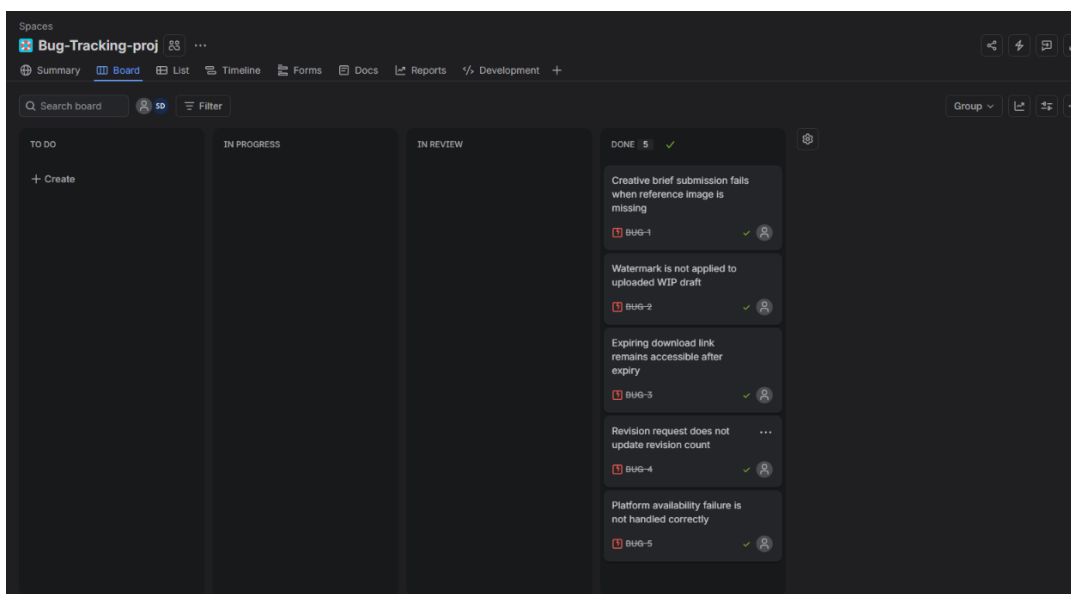

Step 2: BUG-1 and BUG-2 moved to In Progress; 3 bugs remain in To Do.

Step 3: BUG-1 and BUG-2 moved to In Review; BUG-3, BUG-4, BUG-5 moved to In Progress.

Step 4: BUG-1 and BUG-2 completed and moved to Done; BUG-3, BUG-4, BUG-5 in In Review.

Step 5: All 5 bugs successfully moved to Done, completing the workflow.

Conclusion

All five bugs were successfully created, tracked, and moved through each stage of the board (To Do → In Progress → In Review → Done), demonstrating a complete and functional bug tracking workflow in Jira.
