

Alternate Flows

Process Milestone Payment & Release High-Res File (UC-04) *Digital Art Commission & Watermarking Portal — Problem Statement #58*

An alternate flow is a different, still-valid path through a use case. For Problem Statement #58, the supplied UC-04 specification identifies three alternate situations around payment confirmation and high-resolution asset access.

AF-01 — Payment Declined by Gateway

The Payment Gateway can decline a transaction, for example because of insufficient funds or an expired card. The system gives the Client Buyer an opportunity to retry.

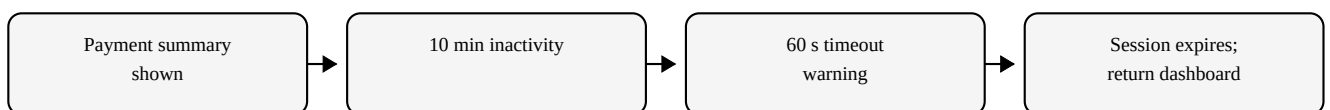

What happens, step by step:

- Payment Gateway returns a decline event.
- System displays a "Payment Failed" banner with the decline reason.
- System prompts the Client Buyer to retry with the same or a different payment method.
- If the Client Buyer retries, the flow returns to Step 5 — Confirm Payment.
- If payment fails twice consecutively, the system locks the payment attempt for 15 minutes, emails the Client Buyer, and leaves the milestone in "Pending Payment".

Who's involved: Client Buyer, Payment Gateway.

AF-02 — Client Buyer Does Not Confirm (Session Timeout)

The Client Buyer may remain inactive on the payment summary screen. Instead of making a charge without confirmation, the session expires safely.

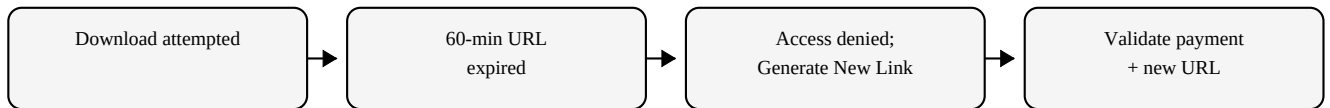

What happens, step by step:

- Client Buyer is inactive for 10 minutes on the payment summary screen.
- System displays a timeout warning: session expiring in 60 seconds.
- If no action is taken, the session expires and the payment summary is dismissed.
- Client Buyer is redirected to the commission dashboard. No charge is made and the use case ends.

Who's involved: Client Buyer.

AF-03 — Signed URL Expires Before Download

The high-resolution source file is protected by an expiring signed S3 URL. If the Client Buyer attempts to download after the 60-minute TTL, the system can issue a fresh link after validating payment.

What happens, step by step:

- Client Buyer attempts to download after the 60-minute TTL has elapsed.
- System returns an "Access Denied - Link Expired" message.
- Client Buyer clicks [Generate New Link].
- System validates that payment is confirmed and generates a new 60-minute signed S3 URL.
- Client Buyer downloads the file and the use case continues from Step 11.

Who's involved: Client Buyer, Object Storage (S3) as the asset-storage service.
